Dental Excellence

KaVo DIAGNOcam.

Helps increasing my revenue.

"The more often I can use my DIAGNOcam the better. I use DIAGNOcam for early caries detection on every patient in every treatment. With this unique transillumination device, I can see caries and other findings very clearly and at an early state of treatment.

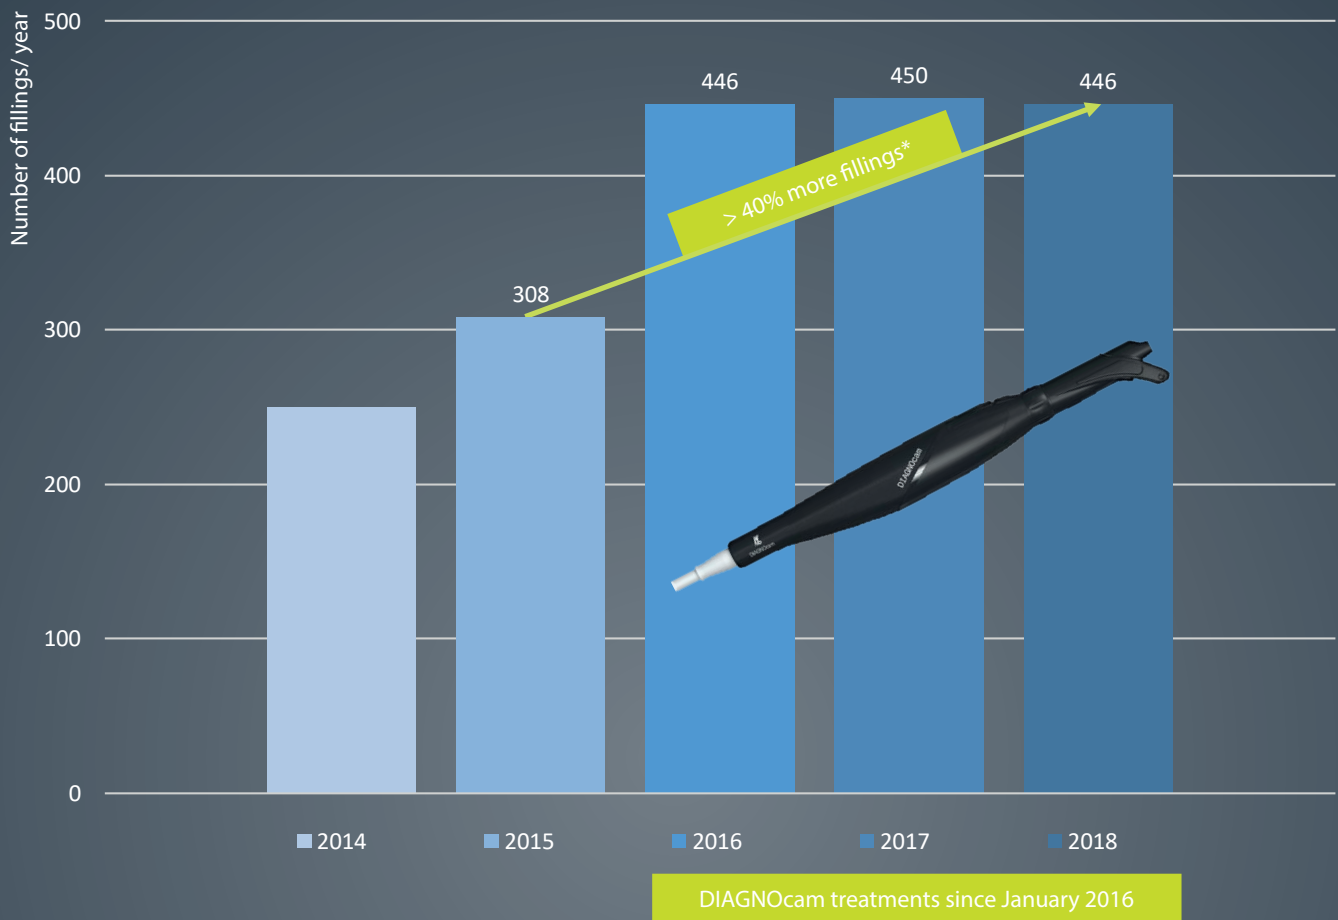

When showing my patients their own clinical situation with DIAGNOcam, they are more likely to accept my treatment recommendation. This also reflects in my revenue: Since I've bought my DIAGNOcam, I am doing significantly more fillings than before.

For me, DIAGNOcam is the perfect assistant for early caries detection."
