

Interesting facts

The masticatory system of human beings consists of the mandibular joint, teeth, and musculature. Headache, pain in the mandibular joint and tenseness are rarely related with the masticatory system.

Your dentist is able to reduce or even eliminate pain with splints.

If you need crowns or dental bridges, the analysis of the mandible movement is of great importance before beginning the real treatment.

Then your dentures fit from the beginning and will do its task for a long time to your satisfaction.

This brochure serves as first information.

For further questions, please ask the practice team.

With pleasure you can take further brochures for your family and friends.

help
you.

With the relief of pain
Muscular pain in face/nape
Back pain
Headache
Tenseness
Tinnitus

With dentures
Aesthetic, functional dentures
Crowns, dental bridges, prosthesis
Implant treatment

Process of treatment

Your detailed description of complaints, the palpation of the musculature and the position of the teeth to each other give first information about the state of your masticatory system.

For production of splints or comprehensive dentures, notations of the complex mandibular movements are needed.

ARCUSdigma measures and analyses all relevant jaw movements.

With the help of the measuring data the repositioning splints or dentures can be produced in the dental laboratory.

Assured diagnosis and therapy with ARCUSdigma

- High-precision three-dimensional navigation
- Fast and easy fixation on head and teeth of lower jaw.
- Short measurement periods (a few minutes) in habitual surroundings on the patient chair

Expenses

The use of measurement systems for analyses of the mandible movement exceeds the benefits of the health fund.

However your dentist decided for this investigation, to guarantee you an optimal supply with the most innovative devices.

Ask your dentist about the expenses.
